Diabetes Research Center Award

var addthis_share = { templates: { twitter: " " } }

The National Institute of Health National Institute of Diabetes and Digestive and Kidney Diseases (NIH NIDDK) has named UCSF Diabetes Center a **Diabetes Research Center**, one of a premier group of national institutions that have established an existing base of high-quality, diabetes-related research. The **Type 1 Diabetes Research Center at UCSF** integrates multiple research programs in areas of islet biology, immunology, and metabolism. For more than two decades, our center has expanded our research base in these area with a facilities infrastructure that coordinates diverse research programs into an interdisciplinary whole. Including senior and early-stage investigators from various departments and schools across UCSF campuses, we provide collective research facilities, a lecture program that

fosters interactions amongst laboratories conducting diabetes research, and fund pilots for new and interdisciplinary research directions with a robust administrative infrastructure that promotes these integrative goals.
