## [JDRF Center of Excellence](#)

```
var addthis_share = { templates: { twitter: "" } }
```

This Center is a cure accelerator and a high impact partnership combining the scientific expertise of Stanford University and the University of California, San Francisco (UCSF) within the collaborative structure and support that are hallmarks of JDRF. Investigators at the Center will seek to better understand and target the interactions between the immune system and the beta cell, in an effort to deliver first-generation, stem cell-based cures for type 1 diabetes
